

Prospective Students

We're glad you are considering the College of Human Environmental Sciences at Oklahoma State University. Since its beginning in 1900 the College of Human Environmental Science has been sensitive and responsive to human needs. Students prepare for careers from restaurant management and fashion design to dietetics and marriage and family therapy. CHES has a rich tradition of applying scientific principles to the relationships between humans and their environments.

Innovative research on the health benefits of certain foods, development of protective apparel and textiles, state of the art facilities for future hospitality leaders and the latest design in early childhood learning environments provide HES students the tools needed for experiential learning. World class faculty, laboratories and internships ensure CHES graduates have the skill and knowledge required to solve human problems and enhance human lives.

In this section of the CHES website you will find the information to help you conduct your college search. Undergraduate Students Graduate Students
